Summary

Senior Software Engineer with **7+ years** of experience **owning products end-to-end**, from system design and implementation to deployment, monitoring, and debugging. Experienced in building and scaling products serving **5M+ users**, and turning complex requirements into reliable production systems. **Uses AI-assisted engineering to accelerate delivery, and problem-solving.**

Experiences

Senior Software Engineer

Tapsi Doctor · Aug 2025 – Present (+1 year) · Tehran (Remote)

- Designed **CI/CD** and release automation pipelines with **n8n**, **Docker**, and **Amazon S3 CDN**, reducing manual deployment effort by approximately **70%**.
- Led the migration of critical services to a **microservices architecture**, introducing asynchronous event-driven communication with **Kafka** and improving system scalability while reducing deployment time by **40%** and production incidents by **30%**.
- Integrated **AI into the team's engineering workflow**, establishing reusable practices for code generation, debugging, testing, and reviews that accelerated development and improved engineering productivity.
- Designed and implemented **Realtime** services, including **event ingestion pipelines**, **background processing**, scheduling, and engagement-triggering mechanism.
- Built structured **logging**, **telemetry**, and monitoring across services, improving production reliability and using **AI-assisted log analysis** to accelerate root-cause detection.

Tech Lead / Senior Software Engineer

Routaa · Jul 2021 – Aug 2025 (4 years, 2 months) · Tehran

- **Owned end-to-end delivery** of 6+ production applications, from technical discovery and architecture through development, infrastructure, deployment, and production support, ensuring features reached production reliably.
- **Used AI-assisted codebase analysis** to generating migration plans, identifying dependency risks, and accelerating test coverage while retaining developer-led review and validation.
- Led the **modernization of legacy frontends** into modular, feature-based architectures, introducing shared foundations that reduced UI-related defects by **~30%** and shortened feature implementation time by **~20%** across products.
- **Designed and maintained a shared Design System** used across multiple applications, increasing component reuse by **~60%** and reducing duplicated UI development while keeping experiences consistent across products.
- Established production engineering and **infrastructure practices** around containerization, CI/CD, monitoring, and release workflows, reducing operational friction for engineering teams.
- **Took ownership of complex cross-stack features from requirement to production**, coordinating frontend, backend, API, data, and integration work while resolving technical blockers and trade-offs without relying on separate handoffs between teams.

Frontend Developer

Apollo · Aug 2020 – Jul 2021 (1 year) · Estonia Remote

- Built **3 applications** with Vue/Nuxt in the **cryptocurrency** and e-commerce domain, including public-facing platforms and admin panels.
- Worked closely with designers and backend engineers to deliver performant, user-centric interfaces under tight timelines.
- Built **real-time analytics and reporting dashboards**, enabling operational visibility and faster data-driven decision-making.
- Improved application scalability through reusable architecture patterns, modular component design, and optimized data flows.

Frontend Developer · Tehran

TMBA · May 2019 – Aug 2020 (1 year, 4 months)

- Delivered multiple client-facing **e-commerce** websites with a strong focus on clean UI and performance.
- Improved internal admin tools through UI refactoring, reducing complexity and improving usability.

Skills

Frontend: TypeScript, JavaScript, React, Next, Vue, Nuxt, Redux, Zustand, Pinia, Tailwind, MUI, Ant, HTML, CSS, SCSS

Backend: Node.js, Express.js, Nest.js, Python, Django, Microservices, Redis, Kafka, RabbitMQ

Connection: WebSockets, GraphQL, MQTT, REST, gRPC

DevOps: Docker, Terraform, OpenTelemetry, Grafana, Linux, Nginx, AWS, S3, Nexus, ArgoCD

Databases: MongoDB, PostgreSQL, MySQL, Prisma

AI & Automation: Claude Code, Cursor, Github Copilot, AI-assisted Development, n8n, AI Workflow Automation

Testing: Jest, Vitest, Cypress, Playwright, Pytest, SonarQube, Bugsnag, Integration Testing, E2E Testing

Build & Tooling: Git, Vite, Webpack, Rollup, Rolldown, NX, Turborepo, Sentry, Mapbox, Figma

Education

Bachelor of Computer Engineering

Azad University · 2018 – 2023

Languages

English – Fluent
